SUMMARY

Software engineer with hands-on production experience building full-stack web applications, multi-tenant platforms, and secure database architectures. Developed and deployed real-world systems using Next.js, React, TypeScript, PostgreSQL, FastAPI, and Supabase, including OpenAI API integration and Microsoft Authentication in a production university platform. Strong foundation in networking, cloud infrastructure, and cybersecurity through Cisco Networking Academy and CyberOps training.

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern - Tajau Berseri Services (SmartTaxApp)

Dec 2025 - Mar 2026

Kuching, Malaysia

- Developed and delivered a production-ready business application independently within a 3-month internship, owning frontend development, backend services, database architecture, deployment workflows, and client handover.
- Designed a relational PostgreSQL data model supporting business classification, tax-rule resolution, multilingual data handling, and administrative workflows, enabling system behaviour to be managed through data rather than hardcoded logic.
- Implemented Supabase Authentication, PostgreSQL Row-Level Security (RLS), and least-privilege access controls to secure user and business data across a multi-tenant environment.
- Built automated import, validation, and reconciliation workflows that streamlined data management and allowed administrators to maintain classifications and business rules without developer intervention.
- Managed source control, deployment environments, and CI/CD-style delivery workflows using GitHub, Vercel, Supabase, and modern development practices to support continuous iteration and production releases.

SELECTED PROJECTS

Full Stack Developer - Swinburne Campus Mobile App

Sep 2025 – May 2026

Swinburne University of Technology Sarawak | Final Year Project

- Built and delivered a production Progressive Web Application (PWA) for the Swinburne IT department, integrating 360° campus navigation, student services, events, and administrative tools; evaluated by 80+ students and visitors with 92% positive feedback.
- Engineered a 360° campus navigation system using interconnected panoramic locations with A* pathfinding, enabling route-finding between buildings and rooms via a mobile-first interface.
- Integrated Microsoft Authentication and a hybrid AI assistant combining OpenAI APIs with custom rule-based routing to handle structured student support queries reliably.
- Secured user data with JWT token validation and database-layer Row-Level Security, scoping all queries to the authenticated user across frontend, API, and database layers.

Full Stack Developer - Park Guide Training & Management Platform

Feb 2025 - Jul 2025

Semenggoh National Park, Kuching, Malaysia

- Built an IoT-enabled operations platform for Semenggoh Wildlife Centre, deployed and tested with 20+ park employees, covering ranger booking, training management, and real-time sensor-based intrusion monitoring.
- Developed an Arduino-based ESP32 monitoring system integrating PIR motion detection and environmental sensors, processing real-time field events and transmitting structured JSON telemetry to backend services for ranger intrusion monitoring and alert management.
- Implemented role-based access control across ranger and administrator functions, and integrated an AI plant recognition model for in-field identification of protected plant species.
- Designed AWS architecture incorporating EC2, RDS, S3, and IAM with least-privilege access controls as part of system infrastructure planning.

EDUCATION

Bachelor of Computer Science, Major in Cybersecurity

Sep 2023 - Jul 2026 (Expected)

Swinburne University of Technology Sarawak Campus, Malaysia

CGPA: 3.5/4.00 | Semester GPA: 3.6/4.00 | Expected graduation: 24 July 2026

Relevant modules: Cloud Computing Architecture | Software Architectures & Design | Deploying Secure Engineering Applications | Introduction to Artificial Intelligence | IT Security | Network Security & Resilience | Malware Analysis

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL,

Frameworks & Runtime: FastAPI, Node.js, Next.js, React, Tailwind CSS

Databases: PostgreSQL, Supabase, Row-Level Security, schema design & normalisation, SQL query optimisation

Cloud & Infrastructure: AWS (EC2, RDS, S3, IAM), Vercel, Linux

Software Design: RESTful API design, software architectural patterns, OOP design patterns, Agile/Scrum

Security: JWT authentication, least-privilege access control, role-based access control, PKI and TLS/SSL fundamentals

Networking: Cisco Networking Academy (ITN, SRWE, ENSA), TCP/IP, Routing & Switching, VLANs, Subnetting

Tools: Git, GitHub, GitHub Actions, Postman, Jira, Confluence

CERTIFICATIONS

In Progress ELITE Certified SOC Administrator — Tecforte

June 2026 Cisco Certified CyberOps Associate

Apr 2026 IELTS Academic — Overall Band 6.5 (Speaking 7.5), CEFR B2

Jun 2025 CCNA: Enterprise Networking, Security & Automation

Jun 2025 CCNA: Switching, Routing & Wireless Essentials

May 2025 CCNA: Introduction to Networks

Jan 2025 Certificate of Participation — GODAMLah Hackathon 2025

LANGUAGES

Turkmen (Native) | Russian (Fluent, C1) | English (B2, IELTS 6.5) | Turkish (B1) | Malay (A2)
