SUMMARY

Self-taught software engineer from Turkmenistan who built and ran a real business at 18 before shipping production systems for real clients during university. Proficient across the full stack — Next.js, React, TypeScript, FastAPI, PostgreSQL, Supabase, AWS — with a cybersecurity and networking foundation from Cisco Networking Academy and CyberOps training. Five languages, two continents, zero shortcuts.

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern — **Tajau Berseri Services (SmartTaxApp)**

Dec 2025 – Mar 2026

Kuching, Malaysia

- Solo-engineered and delivered a production-ready multi-tenant tax compliance platform within a 3-month internship, owning the full lifecycle from architecture through client handover.
- Designed a PostgreSQL data model resolving tax classification conflicts across industry type, revenue bracket, and business category — supporting multilingual records in English, Malay, and Chinese without frontend translation dependencies.
- Built an automated pipeline for unclassified items: unresolved queries are logged, compiled weekly, pushed to a shared cloud drive for admin review, and propagated back into the system with zero developer involvement.
- Secured user and business data across tenant boundaries using Supabase Authentication, Row-Level Security, and least-privilege access controls.

Co-Founder & Operational Lead — **Business Registration & Consulting Venture**

Jan 2022 – Aug 2022

Turkmenistan

- Identified an unaddressed gap in the local market and launched a B2B consultancy from scratch at age 18, providing end-to-end corporate registration, document compliance, and business licensing services.
- Delivered complete company formation for 15+ clients and secured specialized regulatory licensing for 5 niche-market businesses, compressing a multi-month bureaucratic process into a predictable 2–3 week turnaround.
- Built and managed an execution team of 7–8 people — all older — coordinating document pipelines, client onboarding, and government liaison under strict legal deadlines.
- Scaled the business 3–5x within 6 months through word-of-mouth before leaving to pursue a Computer Science degree abroad.

SELECTED PROJECTS

Full Stack Developer — **Swinburne Campus Mobile App**

Sep 2025 – May 2026

Swinburne University of Technology Sarawak | Final Year Project

- Deployed a production Progressive Web Application (PWA) for the Swinburne IT department, blending 360° campus navigation, core student services, and administrative dashboards; verified by 80+ live users with a 92% positive rating.
- Engineered an interactive 360° pathfinding engine utilizing interconnected panoramic data nodes mapped via an A* search algorithm for optimal route generation across campus facilities.
- Integrated Microsoft Authentication and a hybrid AI assistant combining OpenAI APIs with rule-based routing to handle structured student support queries reliably.
- Secured transactional student profiles using JWT token validation coupled with structural database-layer Row-Level Security to safely isolate active user sessions.

Full Stack Developer — **Park Guide Training & Management Platform**

Feb 2025 – Jul 2025

Semenggoh National Park, Kuching, Malaysia

- Built an IoT-integrated operations platform for the Semenggoh Wildlife Centre, actively deployed and tested by 20+ field rangers to coordinate bookings, training records, and environmental alerts.
- Developed an Arduino-based ESP32 perimeter system integrating PIR motion sensors, broadcasting automated JSON data streams to web handlers for real-time asset intrusion logs.
- Managed role-based access control (RBAC) layers distinguishing administrative and ranger permissions, while integrating an AI-driven image recognition module for in-field classification of protected flora.

- Designed and mapped secure AWS infrastructure topologies containing EC2 compute, RDS engines, S3 storage buckets, and IAM privilege policies.

EDUCATION

Bachelor of Computer Science, Major in Cybersecurity — **Swinburne University of Technology Sarawak** *Sep 2023 – Jul 2026*
Kuching, Malaysia | CGPA: 3.5 / 4.00 | Semester GPA: 3.6 / 4.00 | Expected Graduation: 24 July 2026

- Relevant Modules:** Cloud Computing Architecture, Software Architectures & Design, Deploying Secure Engineering Applications, Introduction to Artificial Intelligence, IT Security, Network Security & Resilience, Malware Analysis

TECHNICAL SKILLS

- Languages & Runtimes:** Python, TypeScript, JavaScript, SQL, Node.js
- Frameworks & UI:** FastAPI, Next.js, React, Tailwind CSS
- Databases & Security:** PostgreSQL, Supabase, Row-Level Security (RLS), Schema Normalization, Query Optimization, JWT, Least-Privilege Access, RBAC, PKI, TLS/SSL Fundamentals
- Cloud & Networks:** AWS (EC2, RDS, S3, IAM), Vercel, Linux, TCP/IP, Routing & Switching, VLANs, Subnetting
- Tools & Methodologies:** RESTful API Design, Architecture Patterns, OOP Design Patterns, Agile/Scrum, Git, GitHub Actions, Postman, Jira, Confluence

CERTIFICATIONS

- ELITE Certified SOC Administrator — Tecforte *In Progress*
- Cisco Certified CyberOps Associate *June 2026*
- IELTS Academic — Overall Band 6.5 (Speaking 7.5), CEFR B2 *Apr 2026*
- CCNA: Enterprise Networking, Security, and Automation *Jun 2025*
- CCNA: Switching, Routing, and Wireless Essentials *Jun 2025*
- CCNA: Introduction to Networks *May 2025*
